Vehicle Dynamic Testing

Vehicle Dynamic Testing

Vehicle Testing – Why?

Reliability?

Handling

What is Handling?

A brief history of Handling.....

20th Century

21st Century

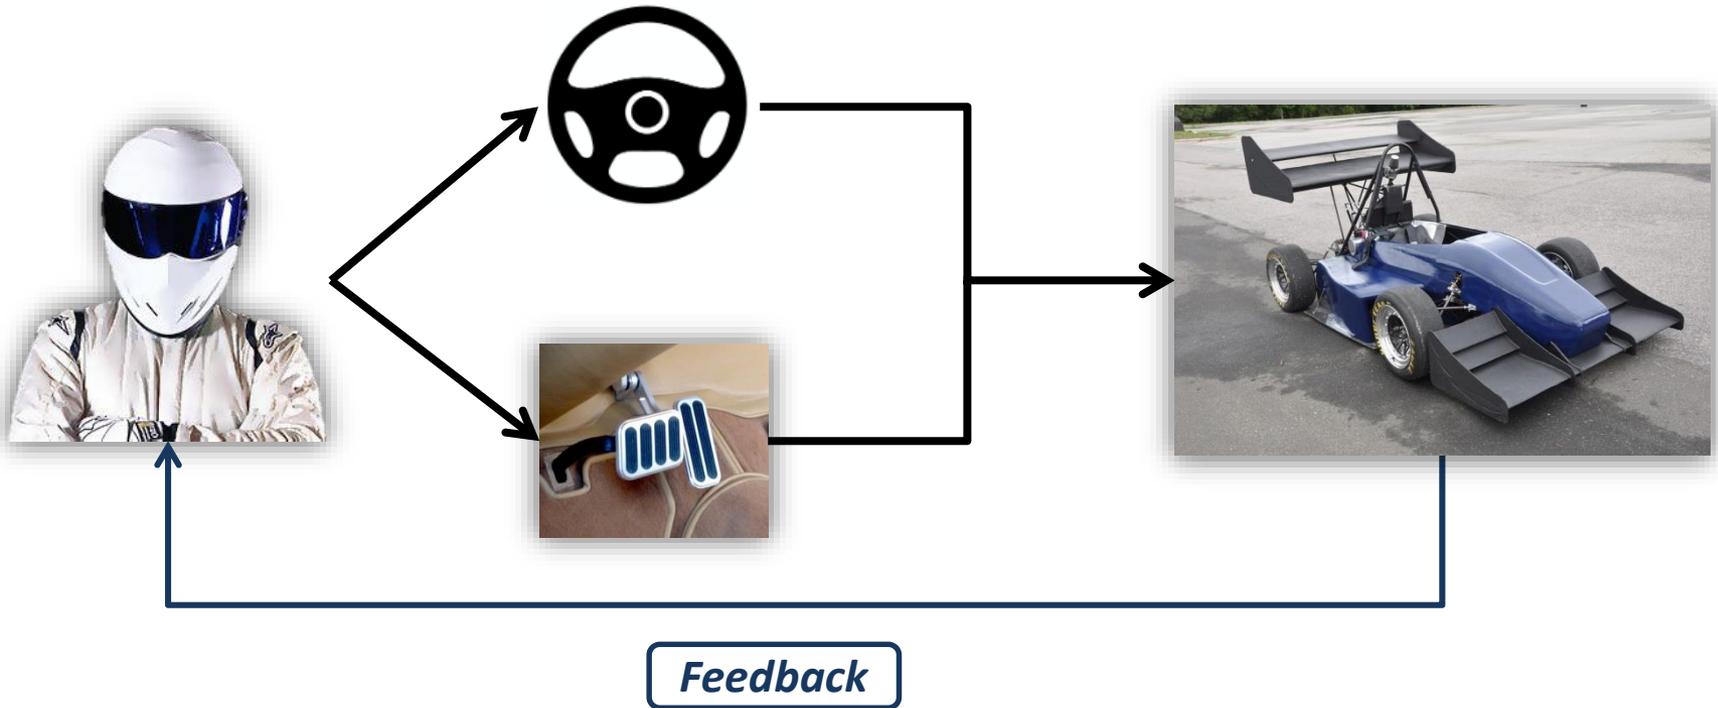

With decades of development, driver still operates vehicle with steering wheel, brake and throttle pedal

What is Handling?

Handling – Interaction between driver and vehicle

Vehicle Evaluation - Subjective

“This car doesn’t
turn **properly**”

“Doesn’t **feel right**”

“I like **this** one”

“Shakes **too much**”

Hard to make engineering decisions

Handling Testing - Skidpad

SAE J266

(Steady-State Directional Control Tests)

3

Constant Speed

Constant Steering Angle

Constant Radius

Max Lateral Acceleration

Understeer Gradient

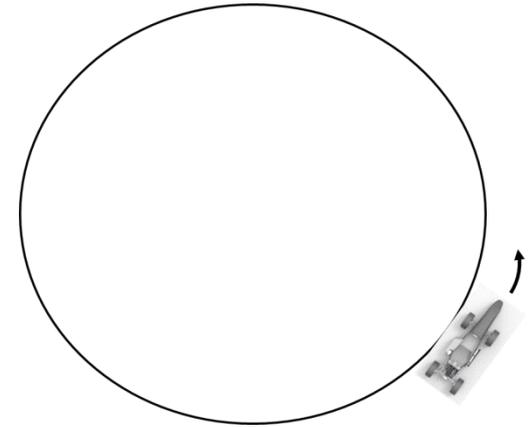

Skidpad Testing

Start at low speed

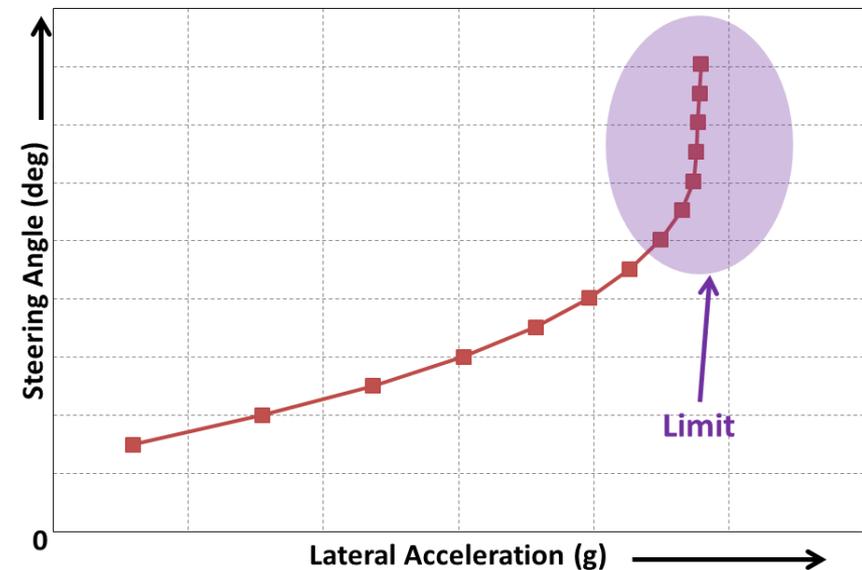

Slowly increasing speeds till
limit

Log steering angle (input)

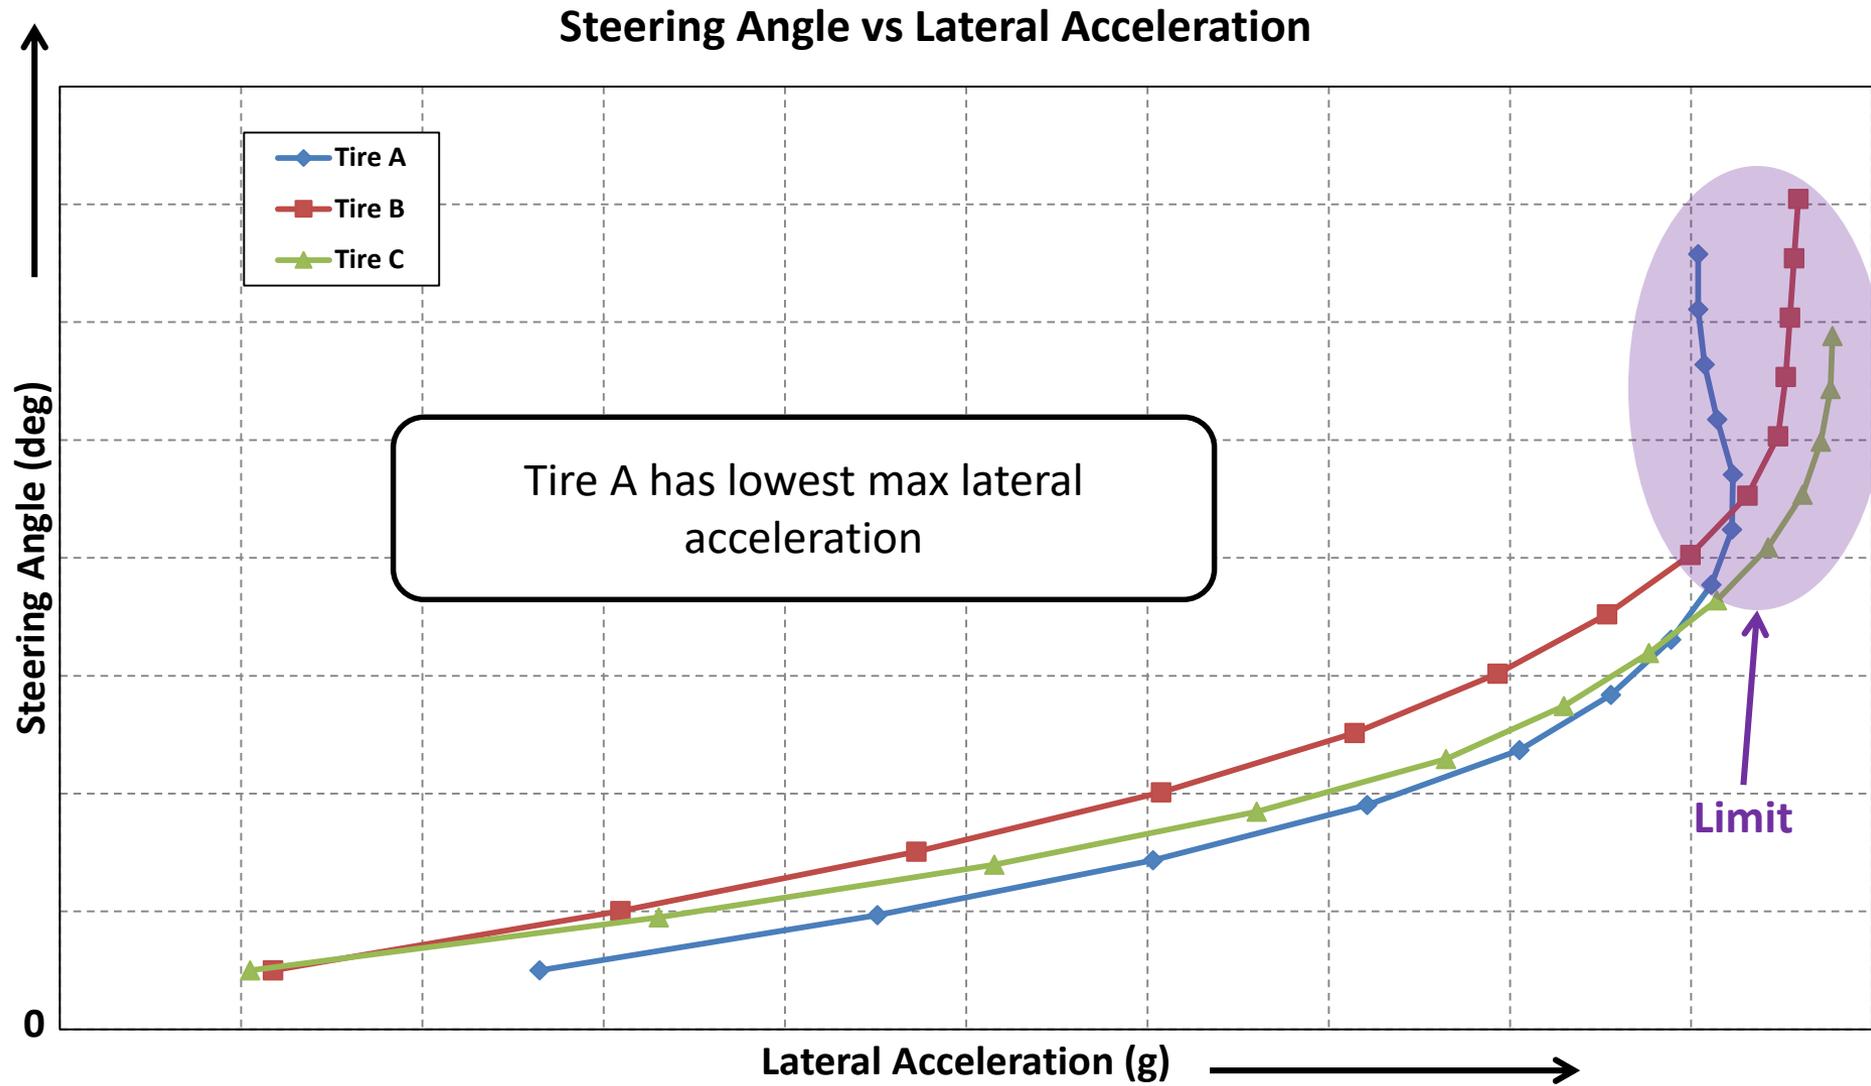

Log speed/yaw rate/lateral
acceleration (output)

Steering Angle vs Lateral Acceleration

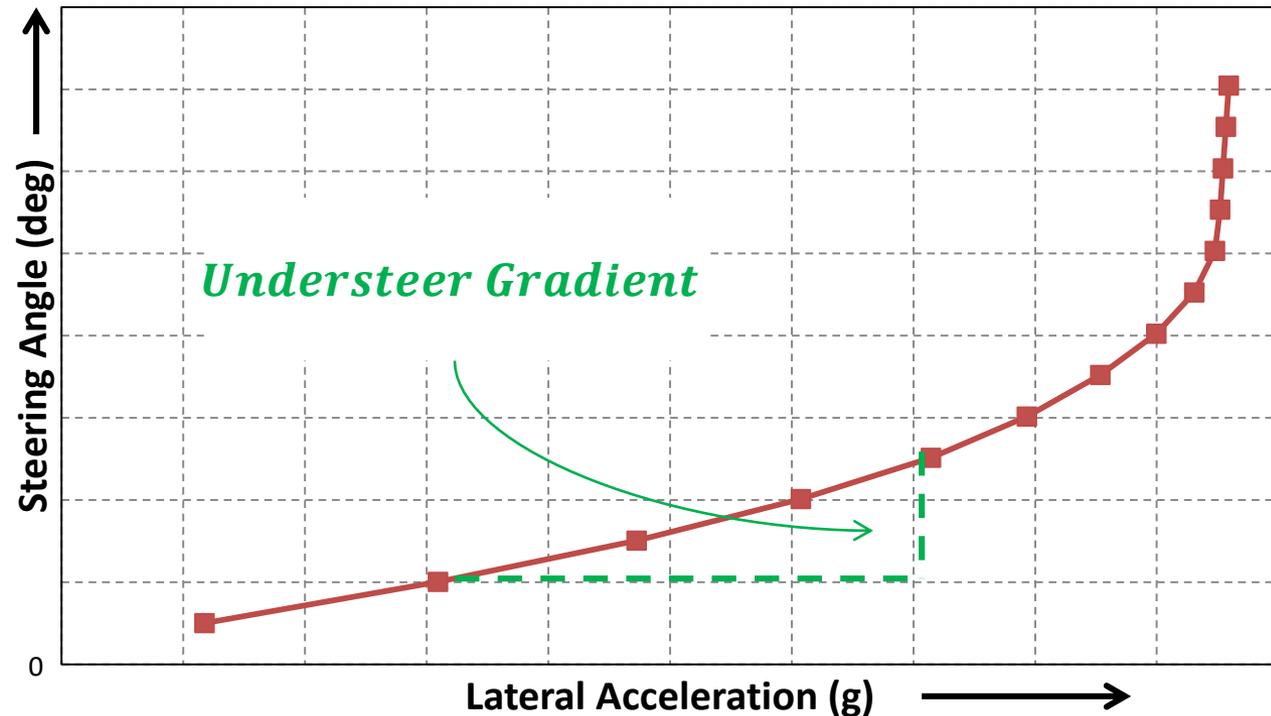

Skidpad Data

Understeer Gradient??

$$\text{Understeer Gradient} = \frac{d\delta}{da_y}$$

Steering Angle vs Lateral Acceleration

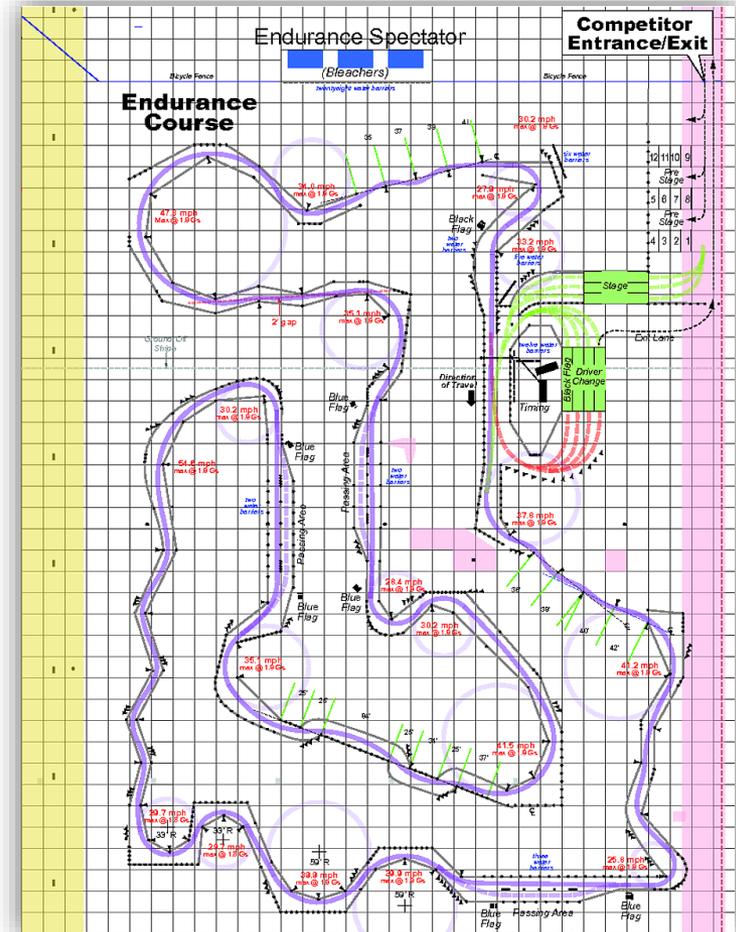

At the Limit?

>70% Turning Maneuver

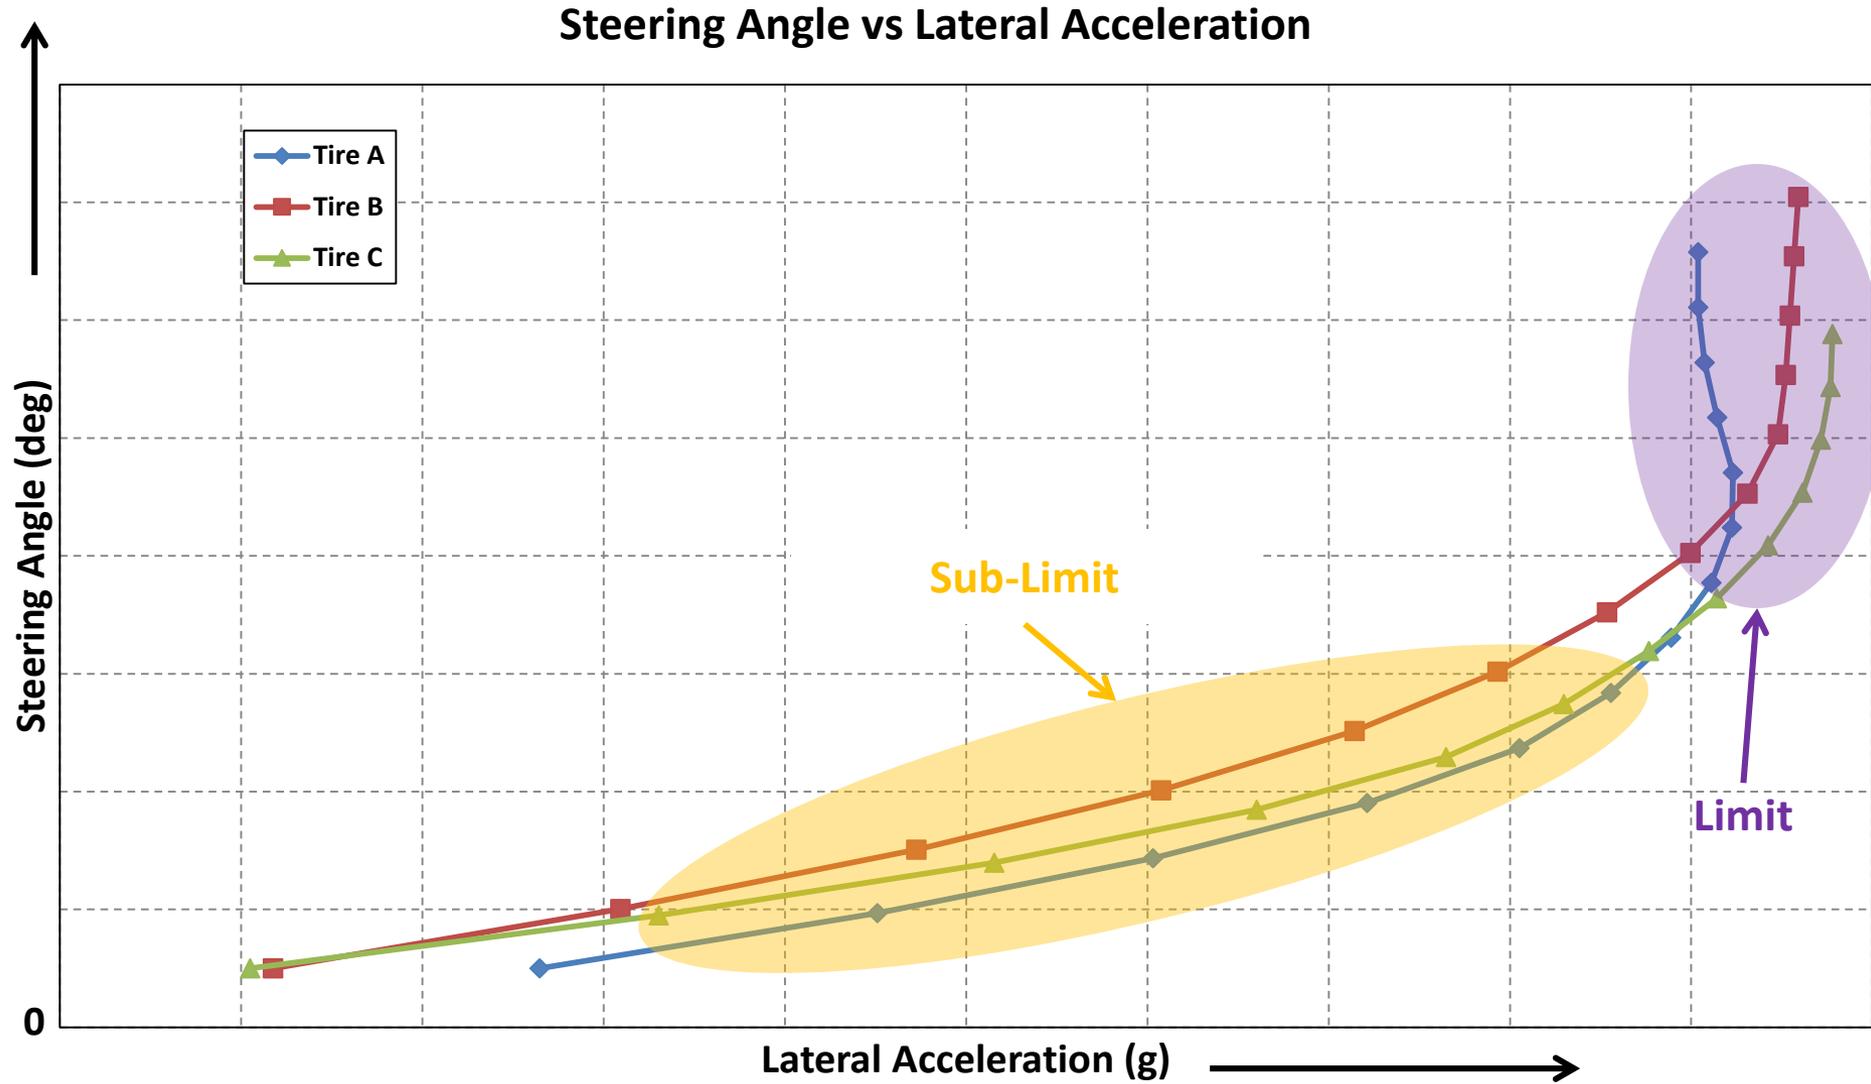

Max Lateral G – How fast can you go?

Understeer Gradient – How do you get to Max Lateral G?

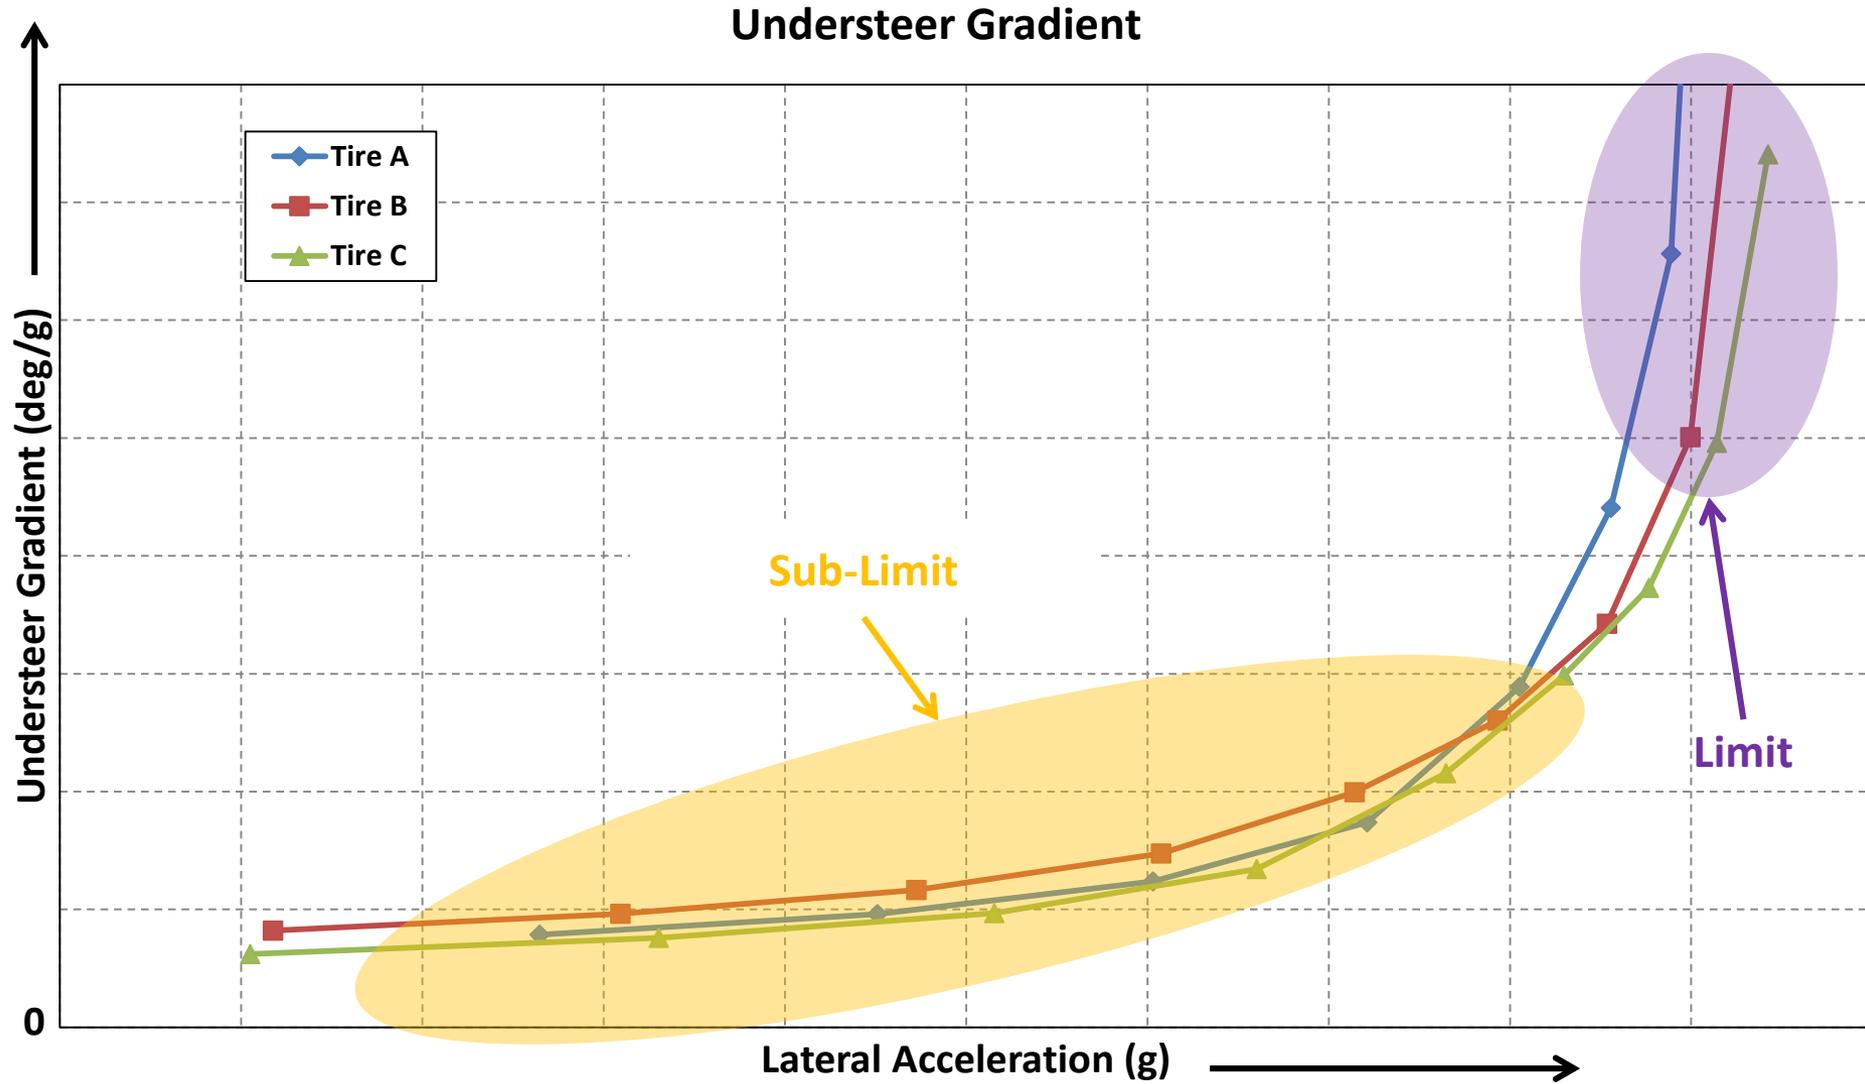

2013 FSAE Lincoln Endurance

Skidpad Data

Understeer Gradient

Skidpad Data

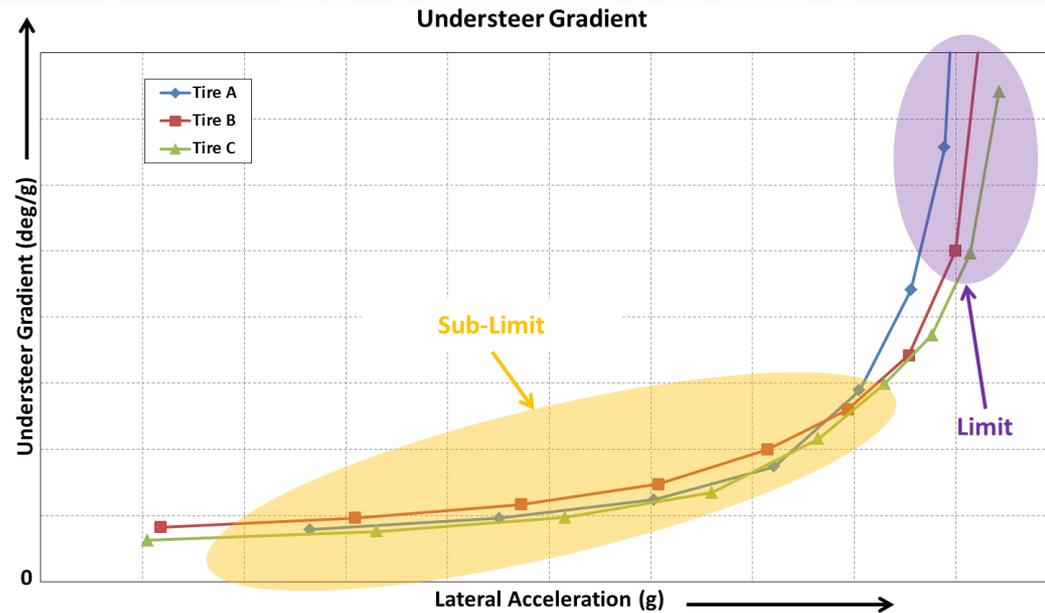

Understeer Gradient

Driver Comments

Tire C has most grip
Tire A better in low
lateral g but understeers
close to limit

Driver Ranking

Peak Grip

1. Tire C
2. Tire B
3. Tire A

Limit Understeer

1. Tire C, Tire B
2. Tire A

Sub-Limit Understeer

1. Tire C, Tire B, Tire A

Driver Comments to Understeer Gradient
